“humidity”

FREE Indoor Air Quality
Inspection!

Why aren't
you more
comfortable?

The amount of humidity in your home drastically affects your family's comfort.

XYZ Heating & Cooling can help.

Your central air conditioning system helps maintain a level of comfort in your home on sticky days—*when it's running*. Humidity continues to build to uncomfortable levels when your air conditioner doesn't run. It happens more often than you think:

- cloudy days
- early morning
- spring
- cooler than normal days
- rainy days
- at night
- fall

That's a significant amount of time that your home will feel sticky, stuffy, and uncomfortable. You don't even have to feel it to notice it. The overwhelming musty smell in your basement is also a clear indication that you have too much moisture in your home. If you're not removing that moisture, you're also providing a more fertile environment for indoor pollutants such as mold, bacteria, and viruses.

Call us for a free Humidity Check with no obligation.

We'll schedule a visit by one of our Indoor Air Quality professionals. We can show you how to maintain a cleaner, healthier home. We can also tell you if your indoor air is too dry or too humid and recommend ways to solve air quality problems. We will do this on-site inspection FREE, entirely without obligation.

PLUS you'll receive our Indoor Air Quality Checklist, absolutely free.

This free brochure tells you 10 simple things you can do yourself to make sure your home's indoor air quality stays healthy and comfortable for your whole family.

ENJOY COMPLETE COMFORT EVERY DAY. CALL XYZ HEATING AND COOLING FOR YOUR FREE INDOOR AIR QUALITY INSPECTION AND CHECKLIST. ASK ABOUT OUR ANNUAL CLEAN AND CHECK PROGRAM.
