

The Aprilaire® Solution To Indoor Air Pollution.

While the dangers of indoor air pollution are many, the solution is surprisingly simple. By installing an Aprilaire® Fresh Air Exchanger, you provide your entire house with needed ventilation and conserve energy as compared to other methods of ventilation.

Today's homes are sealed for energy efficiency and a build-up of radon, formaldehyde, smoke, and odors is a typical problem.

The Aprilaire Fresh Air Exchanger acts much like a high-tech open window. The difference is its EnergyMax™ Transfer Core that lets incoming fresh air and exhaust stale air flow past each other with minimal energy loss. The result is energy efficient ventilation for your home, which is a change for the better.
